

The total possible points are 85:

P1 (20): each question worth 10.

P2 (15): each market size for gasoline, syrup, and aspirin worth 3 points; second part worth 6 points. The points are offered as long as there is a reasonable logic behind the estimations.

P3 (20): each of consumption worth 7 points; percentage for decrease in consumption worth 6 points.

P4 (15): using ALL data to calculate k (either through linearization or non-linear fit) worth 10 points; second part is 5 points.

p5 (15): (a) deriving the right specific gravity worth 6 and getting the right volume worth 6; (b) 3 points.
