

The total possible points are 53:

P1(15): compositions of the two streams, flow rates of the two streams and kg solvent/kg feed each worth 3 points.

P2(10): equations for solving the process worth 5 points; right solution of the problem worth 5 points.

P3(10): (a) equations for ideal gas worth 4 points; right solution for Q worth 2 points. (b) 4 points; kinetic energy is not determined in the problem; it needs velocities in the inlet and outlet to be defined,

P4(18): each of the question (a-f) worth 3 points.
