

Computing Resources

Sl. No.	Facilities Name	Description	Link
1	Academic Computing and Communications Center (ACCC) main site	The Academic Computing and Communications Center provides and maintains technologies and services critical to many university functions. From infrastructure services like the UIC network and data storage to communication and collaboration services like websites, email, and calendaring, ACCC is here to provide and support the technologies	link
2	General Infrastructure	Infrastructure services maintain the enterprise-level hardware, software, systems, and network infrastructure that provides the underlying foundation for university activities. Services in this category include the hosting and administration of databases; the maintenance of physical data centers and strategy for data center management; the provisioning, hosting, and administration of servers; the back-end technology and services required to maintain core storage capabilities; and the maintenance of infrastructure items required to offer network connectivity.	link
3	ADSM	Departmental servers contain a vast amount of valuable data critical to the university's missions of instruction and research. The university has an interest in making sure this data is not inadvertently lost, whether by human error, equipment failure, or malware attack. The owners and administrators of these systems can request backup services. Backups for servers, powered by IBM Spectrum Protect software, allows you to back up servers over the UIC campus network unattended and automatically. In the event of inadvertent deletion of one or more files, hard disk failure, or malware infection, backups can be used to restore your files.	link
4	CrashPlan	CrashPlan is an online backup service that boasts an excellent interface, unlimited storage plans, and the ability to back up to your own internet-connected computers. CrashPlan is not offered for server backups, or personal data from privately-owned computers, but is available for backups of UIC-related	link

		data on individual UIC-owned devices.	
5	Cloud Computing	Microsoft Azure is an ever-expanding set of cloud services to help UIC innovate and meet your organizational needs. It's the freedom to build, manage, and deploy applications on a massive, global network using your favorite tools and frameworks.	link
6	Data Center	ACCC's West Campus Data Center provides a server hosting environment including UPS and Generator backup power. This ACCC controlled space is operated as a university HIPAA covered entity, departmental server resource, in order to provide secure and reliable services for university servers, computing, and data applications.	link
7	Database Services	The ACCC hosts two types of local database servers for use by individuals, departments, or other campus groups: MySQL and MS SQL. Both are relational database management systems that support multiple databases and allow multiple people to access each one.	link
8	Networks	Network services are provided for wired and wireless networks. Network access is provided in student residences, academic, and administrative buildings.	link
9	Storage	Active Directory Desktop Advantage drive storage provides central storage of data and files for Active Directory users. This storage is called Active Directory Network Storage.	link
10	Virtual Machines	A Virtual Machine is a guest server hosted on a VM host. The ACCC VM service includes maintenance of the physical environment such as power, cooling, physical security and networking, system monitoring, patches and upgrades, backups, business continuity and disaster recovery, and performance tuning.	link
11	Computer Labs	Labs are distributed throughout the campus, although the vast majority are concentrated on the east campus	link
12	Virtual Computer Lab	Newly available as of Spring 2020, the Virtual Computer Lab provides UIC students, faculty, and staff with access to specialized software from their own devices.	link

13	Computing Services	Computing services enable students, faculty, and staff to do their day-to-day work, including providing access to enterprise services. Services in this category include support for the management of University-owned end-point devices and associated operating and application software; printing services, including applications for managing these services, such as print quota systems, and the distribution of software and licenses.	link
