

ChE 210 – Introduction to Thermodynamics –Spring 2018

Student Learning Outcome 1

Rubric for assessment problem on final exam (Problem #1)

Application of energy and entropy balances to a piston/cylinder device with water.

SLO 1 Performance Indicator (PI)	(1) Unsatisfactory	(2) Developing	(3) Satisfactory
1. Apply mathematical and scientific principles to formulate models and systems relevant to the subject	Able to successfully combines mathematical and/or scientific principles to formulate models and systems relevant to chemical engineering	Chooses a mathematical model or scientific principle that applies to an engineering problem, but has trouble in model development	Does not understand the connection between mathematical models and the system or process to be analyzed or designed
2. Solve engineering problems by using the concepts of algebra, calculus, differential equations and/or linear algebra	applies concepts of algebra, calculus, differential equations and/or linear algebra to solve chemical engineering problems	Shows nearly complete understanding of applications of calculus and/or linear algebra in problem-solving	Does not understand the application of algebra, calculus, differential equations and/or linear algebra in solving chemical engineering problems
4. Translates academic theory into engineering applications	Translates academic theory into engineering applications and accepts limitations of mathematical models of physical reality	Some gaps in understanding the application of theory to the problem and expects theory to predict reality	Does not appear to grasp the connection between theory and the problem

Averages:

Performance Indicators: (1) 2.51 (2) 2.32 (4) 2.46 Overall Average: 2.43

Students did have trouble using algebra to solve sets of algebraic equations derived from material balances (PI2). Students did better in using the principles of material balances to set up the equations (PI1 and PI3). The majority of students were able to satisfy the learning outcome and should be prepared for future course that use these skills.

Open Book and Closed Notes

SPECIAL NOTE: Do all calculations in the exam booklet provided. To receive full credit, write your final answer in the space provide on this sheet. You must turn this sheet with your exam booklet.

1. (50 points) Sucrose ($C_{12}H_{22}O_{11}$) can be converted to glucose and fructose (both $C_6H_{12}O_6$) according to the reaction

The mixture of glucose and fructose is called inversion sugar (I). If we give sucrose the symbol S and water the symbol W, the reaction can be written simply as

The process is shown below where the reactor has a single-pass conversion of sucrose of 80%. The process is fed 100 kmol of 12.2 mol% S and the remainder W. The reactor effluent is fed into a splitter with a product stream and a recycle stream of identical composition. The recycle stream has a flow rate of $n_4 = 20$ kmol.

- (a) Do a degree of freedom analysis following page 105 of the text and show that the problem is sufficiently specified. (5 pts.)

- (b) Using balances on the total molar flow rates, calculate the molar flow rates of the reactor input, output, and the product stream. (15 pts.)

$n_1 =$ _____ kmol input, $n_2 =$ _____ kmol output, $n_3 =$ _____ kmol product

- (c) Using balances on species, write six more independent equations to calculate the mole fractions of the input and output stream for the reactor. These equations should be linear in the unknowns. (30 pts.)

$X_{1S} =$ _____, $X_{1W} =$ _____, $X_{1I} =$ _____

$X_{4S} =$ _____, $X_{4W} =$ _____, $X_{4I} =$ _____

Final Exam CHE 210 Spring 2018

Prob 1 (a) $4a = 2 + 3 + 3 + 3 + 3 = 14$ ind stream vars.
 $4b = \frac{1}{15}$ ind eqs vars.

specified flows $5a = 2$ $\leftarrow$ splitter $(N-1)(N_s-1) = (3-1)(2-1) = 2$

Stream comp $5b = 1 + 2 = 3$

performance $5c = 1$ (86% conversion)

mat bal Eqs. $5d = 3 + 3 + 3 = 9$ ~~15~~ $\leftarrow$ splitter
 mix RX split

$$DOF = 0$$

(b) Total overall

$$n_F = n_3 = 100 \text{ kmol}$$

total mixer

$$n_F + n_4 = n_1 = 120 \text{ kmol}$$

total Reactor

$$n_1 = n_2 = 120 \text{ kmol}$$

$$\text{conv} = 0.8 = \frac{(x_{1s} - x_{4s})120}{(x_{1s})120}$$

(c) Mixer

$$S \quad 12.2 + x_{4s}(20) = x_{1s}(120) \quad (1)$$

$$I \quad x_{4I}(20) = x_{1I}(120) \quad (2)$$

Reactor

$$S' \quad x_{4s}(120) = x_{1s}(120) - (0.8)x_{1s}(120) \quad (3) \leftarrow$$

$$W \quad x_{4w}(120) = x_{1w}(120) - (0.8)x_{1s}(120) \quad (4)$$

constraint on mole fractions

$$x_{4s} + x_{4w} + x_{4I} = 1 \quad (5)$$

$$x_{1s} + x_{1w} + x_{1I} = 1 \quad (6)$$

six independent eqns.

(2)

Solve ① & ③ together

$$12.2 + 20x_{4s} = 120x_{1s}$$

$$x_{4s} = x_{1s} - 0.8x_{1s} = 0.2x_{1s}$$

$$12.2 + 20(0.2x_{1s}) = 120x_{1s}$$

$$(120 - 4)x_{1s} = 12.2$$

$$x_{1s} = \underline{0.1052} = \frac{12.2}{116}$$

$$x_{4s} = \underline{0.02103}$$

Solve ②, ④, ⑤, & ⑥

$$20x_{4t} = 120x_{1t}$$

$$x_{4w} = x_{1w} - 0.8x_{1s} = x_{1w} - 0.08414$$

$$x_{4w} + x_{4t} = 1 - 0.02103 = 0.97897$$

$$x_{1w} + x_{1t} = 1 - 0.1052 = 0.8948$$

$$x_{1w} - 0.08414 + x_{4t} = 0.97897$$

$$x_{1w} + x_{4t} = 1.06311$$

$$x_{4t} + x_{1t} = 1.06311 - 0.8948 = 0.16831$$

$$S = (0.8)(0.1052)(120)$$

$$= 10.10$$

$$f_s^{rev} = \frac{10.10}{12.2} = \underline{0.828}$$

The recycle is not doing much good! 82.8% compared with 88% single pass conv.

$$\frac{120}{20}x_{1t} - x_{1t} = 0.16831$$

$$x_{1t} = \underline{0.03366}$$

$$x_{4t} = 6x_{1t} = \underline{0.2020}$$

$$x_{1w} = 1.06311 - x_{4t} = \underline{0.8611}$$

$$x_{4w} = \frac{0.97897}{x_{1w} - 0.08414} = \underline{0.7770}$$
