Paula Allen-Meares
Chancellor
University of Illinois at Chicago
601 S. Morgan St., 2833 UH (MC 102)
Chicago, IL 60607-7128

Dear Dr. Allen-Meares :

I am pleased to transmit to you the findings of the Engineering Accreditation Commission (EAC) of ABET with respect to the evaluation conducted for University of Illinois at Chicago during 2014-2015. Each of ABET's Commissions is fully authorized to take the actions described in the accompanying letter under the policies of the ABET Board of Directors.

We are pleased that your institution has elected to participate in this accreditation process. This process, which is conducted by approximately 2,000 ABET volunteers from the professional community, is designed to advance and assure the quality of professional education. We look forward to our continuing shared efforts toward this common goal.

Sincerely,

Katherine James Rogers
President

August 10, 2015

Peter Nelson
Dean of Engineering
University of Illinois at Chicago
M/C 159, 832 SEO Building
851 S. Morgan Street
Chicago, IL 60607

Dear Dr. Nelson :

The Engineering Accreditation Commission (EAC) of ABET recently held its 2015 Summer Meeting to act on the program evaluations conducted during 2014-2015. Each evaluation was summarized in a report to the Commission and was considered by the full Commission before a vote was taken on the accreditation action. The results of the evaluation for University of Illinois at Chicago are included in the enclosed Summary of Accreditation Actions. The Final Statement to your institution that discusses the findings on which each action was based is also enclosed.

The policy of ABET is to grant accreditation for a limited number of years, not to exceed six, in all cases. The period of accreditation is not an indication of program quality. Any restriction of the period of accreditation is based upon conditions indicating that compliance with the applicable accreditation criteria must be strengthened. Continuation of accreditation beyond the time specified requires a reevaluation of the program at the request of the institution as noted in the accreditation action. ABET policy prohibits public disclosure of the period for which a program is accredited. For further guidance concerning the public release of accreditation information, please refer to Section II.A. of the 2014-2015 Accreditation Policy and Procedure Manual (available at www.abet.org).

A list of accredited programs is published annually by ABET. Information about ABET accredited programs at your institution will be listed in the forthcoming ABET Accreditation Yearbook and on the ABET web site (www.abet.org).

It is the obligation of the officer responsible for ABET accredited programs at your institution to notify ABET of any significant changes in program title, personnel, curriculum, or other factors which could affect the accreditation status of a program during the period of accreditation stated in Section II.H. of the 2014-2015 Accreditation Policy and Procedure Manual (available at www.abet.org).

ABET requires that each accredited program publicly state the program's educational objectives and student outcomes as well as publicly post annual student enrollment and graduation data as stated in Section II.A.6. of the Accreditation Policy and Procedure Manual (available at www.abet.org).

ABET will examine all newly accredited programs' websites within the next two weeks to ensure compliance.

Please note that appeals are allowed only in the case of Not to Accredited actions. Also, such appeals may be based only on the conditions stated in Section II.L. of the 2014-2015 Accreditation Policy and Procedure Manual (available at www.abet.org).

Sincerely,

A handwritten signature in black ink, appearing to read 'William J. Wepfer', with a stylized flourish at the end.

Accredit to September 30, 2021. A request to ABET by January 31, 2020 will be required to initiate a reaccreditation evaluation visit. In preparation for the visit, a Self-Study Report must be submitted to ABET by July 01, 2020. The reaccreditation evaluation will be a comprehensive general review.

**FINAL STATEMENT
Visit Dates: October 5-7, 2014
Accreditation Cycle Criteria: 2014-2015**

Introduction & Discussion of Statement Construct

The Engineering Accreditation Commission (EAC) of ABET has evaluated the bioengineering, chemical, civil, computer, electrical, industrial, and mechanical engineering programs of the University of Illinois at Chicago.

This statement is the final summary of the EAC evaluation at the institutional and program levels. It includes any information received during due process, including information submitted with the seven-day response. The statement that follows consists of two parts: the first addresses the institution and its overall engineering educational unit, and the second addresses the individual engineering programs. It is constructed in a format that allows the reader to discern both the original visit findings and subsequent progress made during due process.

A program's accreditation action is based upon the findings summarized in this statement. Actions depend on the program's range of compliance or non-compliance with the criteria. This range can be construed from the following terminology:

- **Deficiency:** A deficiency indicates that a criterion, policy, or procedure is not satisfied. Therefore, the program is not in compliance with the criterion, policy, or procedure.
- **Weakness:** A weakness indicates that a program lacks the strength of compliance with a criterion, policy, or procedure to ensure that the quality of the program will not be compromised. Therefore, remedial action is required to strengthen compliance with the criterion, policy, or procedure prior to the next review.

- **Concern:** A concern indicates that a program currently satisfies a criterion, policy, or procedure; however, the potential exists for the situation to change such that the criterion, policy, or procedure may not be satisfied.
- **Observation:** An observation is a comment or suggestion that does not relate directly to the current accreditation action but is offered to assist the institution in its continuing efforts to improve its programs.

The University of Illinois at Chicago (UIC) is a comprehensive state-assisted university comprised of 15 colleges with more than 28,000 students who come primarily from the city of Chicago and its suburbs. The College of Engineering offers seven engineering programs being evaluated during this visit. The college has additional programs in computer science, engineering management, and engineering physics. The college has approximately 2,700 undergraduate students, 1,200 graduate students, 130 full-time faculty members, and a large complement of adjunct faculty members. Faculty members are active in the scholarship of both teaching and research, with research funding amounting to nearly \$500,000 per faculty member. The college had 488 graduates during the previous academic year. A substantial fraction of the students transfer to the College of Engineering from community colleges and other schools in the greater Chicago area. The current dean has been in his position for seven years.

The following units were reviewed and found to offer good support to the engineering programs: mathematics, physics, chemistry, library, instructional technology, the first-year writing program, assessment, career services, registrar, and admissions.

Institutional Strengths

1. The UIC Innovations Center offers substantial space and industrial funding for student projects involving multidisciplinary teams from engineering, business, and industrial design. Design projects often result in state-of-the-art solutions to technological problems.
2. The location of the university is a unique strength for the College of Engineering. The large number of engineering employers in the greater Chicago area provides a wealth of opportunities for internships, co-ops, and permanent positions for the students of the college.

3. The Engineering Career Center operated by the college is exceptional in the services it delivers to the students. Of special significance is the extraordinary effort made to locate multiple-year internships for students, which in turn often lead to excellent employment opportunities.
4. The faculty of the College of Engineering is distinguished, particularly for its relatively small size. Their numbers include two members of the National Academy of Engineering, 54 fellows of professional engineering societies, 28 NSF, ONR, and other career awardees, and 10 editors of major research journals.

**Chemical Engineering
Program**

**Program Criteria for Chemical, Biochemical, Biomolecular, and Similarly Named Engineering
Programs**

Introduction

The chemical engineering program resides in the Department of Chemical Engineering. The program has 10 faculty members, including six tenured professors and four assistant professors. Two of the faculty members are part time and eight are full time. They also have three adjunct faculty members. The program has a five-year average enrollment of 194 undergraduate students, with 35 B.S. degrees granted in the 2013-14 academic year.

Program Strengths

1. The Department of Chemical Engineering has a commitment to incorporating safety and hazard analysis into seven of their classes. SChE (Safety and Chemical Engineering) modules from the American Institute of Chemical Engineers (AIChE) are used in these courses to facilitate student education in this important topic. Additionally, safety and hazard handling is a major part of the unit operations laboratory. This commitment to safety clearly indicates the department's dedication to this important skill for their students.
2. The chemical engineering faculty members are very dedicated to undergraduate education. They operate in an unusually collaborative environment, meeting together frequently to make decisions about the undergraduate program and fully participating in the accreditation processes. The students in the program are very complementary about the program and the faculty.
3. The program personnel who are providing leadership for the assessment of the undergraduate program have developed comprehensive documentation and processes. The organization of the materials both in the self-study report and on-site materials was very professional and detailed.
